What is a problem?

Plans to expand existing and construction of transportation infrastructure increased fast, especially in Poland. It is a challenge for nature conservation, which has a long history but not in the Western European countries. The ecological corridors are a requirement for individuals in existing Western Europe.

How consistent is the European Union trans-European infrastructure and environment of our country? Infrastructure projects are increasing and infrastructure projects are increasing. The EU has a long history of infrastructure development. There is a need for infrastructure that will be able to support the development of population and economic activities.

What solutions have been employed?

Project of ecological corridors in Poland

Project of ecological corridors are designed to be a network of ecological corridors that will connect the major roads and ecological corridors. The project is designed to be a network of ecological corridors that will connect the major roads and ecological corridors.

The project is a network of ecological corridors that will connect the major roads and ecological corridors. The project is a network of ecological corridors that will connect the major roads and ecological corridors.

Spreading of knowledge

Spreading of knowledge is a key element of the project. It is a key element of the project. It is a key element of the project.

The project is a network of ecological corridors that will connect the major roads and ecological corridors. The project is a network of ecological corridors that will connect the major roads and ecological corridors.

The project is a network of ecological corridors that will connect the major roads and ecological corridors. The project is a network of ecological corridors that will connect the major roads and ecological corridors.

The project is a network of ecological corridors that will connect the major roads and ecological corridors. The project is a network of ecological corridors that will connect the major roads and ecological corridors.

The project is a network of ecological corridors that will connect the major roads and ecological corridors. The project is a network of ecological corridors that will connect the major roads and ecological corridors.

Regulation of existing structures for animals

The project is a network of ecological corridors that will connect the major roads and ecological corridors. The project is a network of ecological corridors that will connect the major roads and ecological corridors.

The project is a network of ecological corridors that will connect the major roads and ecological corridors. The project is a network of ecological corridors that will connect the major roads and ecological corridors.

Why should this project be recognized by an IENE award?

The project is a network of ecological corridors that will connect the major roads and ecological corridors. The project is a network of ecological corridors that will connect the major roads and ecological corridors.
